

LIKE TO TOUCH ?

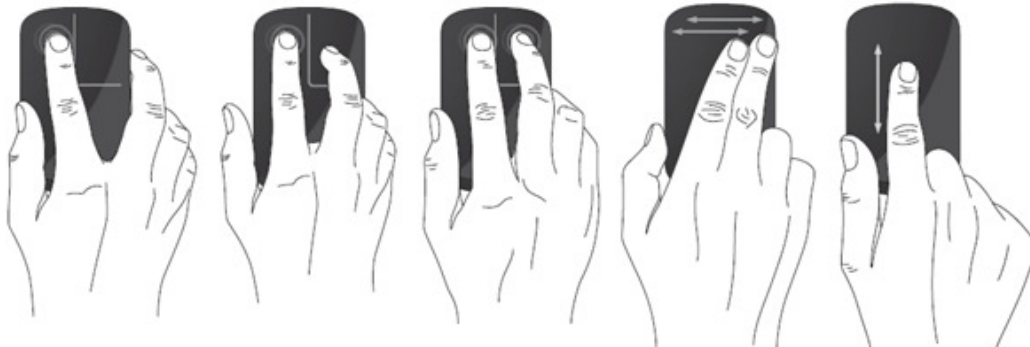

To follow the latest market trends of computer accessories Media-Tech introduces a noteworthy model of mouse uses multitouch technology.

E-SENSE MT1096 is a wireless mouse with touching surface, which introduces the intuitive way to control different applications. Just swipe your fingers over the touch panel and you are able to control your computer. Such solution is possible by replacing the traditional mechanical buttons with specially arranged, precise touch sensors. This interesting modification of computer mouse, giving a new dimension, and brings solutions of touchpad.

The greatest advantage is the possibility programming the mouse, which allows to translate particular gestures into available commands. This way you can decide by your own how to work with this device.

Besides the two basic functions, which simulate left and right button in traditional mouse, you can move your fingers on all the surface in all directions touching the mouse (forward/backward, scrolling function vertical and horizontal and zoom). Additionally, the mouse has been equipped with high-resolution 1000dpi optical sensor, which gives you guarantee of smooth and precise work in almost every conditions. With single swipe of your finger you can scroll the documents, photographs and browsing the web pages. You can easily program the hot keys as well as assign macro

commands.

E-SENSE MT1096 connects to a computer via nano-receiver, so the mouse is suitable for mobile users.

The mouse is ideal for both left- and right- handed users. All you have to do is just to adjust the settings.
